

都道府県別75歳未満がん年齢調整死亡率 (2011年)

Age-adjusted Cancer Mortality Rate under Age 75 by Prefectures (2011)

75歳未満の年齢調整死亡率 (2011年) で比較した場合、 全がん死亡率が**低い**上位 5 県は、

男女計 長野県、岡山県、香川県、福井県、滋賀県 男性 長野県、滋賀県、香川県、熊本県、岐阜県 女性 岡山県、島根県、福井県、香川県、新潟県 The five prefectures with **lowest** age-adjusted cancer mortality rate under age 75 in 2011 were as follows.

Both sexes Nagano, Okayama, Kagawa, Fukui and Shiga Males Nagano, Shiga, Kagawa, Kumamoto and Gifu Females Okayama, Shimane, Fukui, Kagawa and Niigata

(3) 胃がん Stomach

(4) 結腸がん Colon

(5) 直腸がん Rectum

75歳未満年齢調整死亡率(人口10万対) Age-adjusted mortality rate under age 75 (per 100,000)

がん死亡率が高い上位5県は、

男女計 青森県、和歌山県、佐賀県、鳥取県、北海道 男性 青森県、鳥取県、和歌山県、秋田県、北海道 女性 佐賀県、和歌山県、北海道、大阪府、青森県 である。全がん死亡率が高いこれらの都道府県は、主要 5 部位(胃、大腸、肝臓、肺、乳房)の死亡率も高い傾向が ある。 The five prefectures with highest age-adjusted cancer mortality rate under age 75 in 2011 were as follows.

Both sexes Aomori, Wakayama, Saga, Tottori and Hokkaido Males Aomori, Tottori, Wakayama, Akita and Hokkaido Females Saga, Wakayama, Hokkaido, Osaka and Aomori

Those five prefectures with high all-cancer mortality rate also tended to show high mortality rates for major five cancer sites (stomach, colon/rectum, liver, lung, and breast)

部位別で死亡率の地域差が明らかな部位は、

[**胃がん**] 男女とも東北地方の日本海側と北陸地方で死亡率が高い。

[肝臓がん] 男女とも西日本で死亡率が高い。これは、西日本でC型肝炎ウィルスの感染者割合が高いことに関連している。

Geographic patterns of site-specific cancer mortality were as follows.

[Stomach] Higher mortality rate for both sexes was seen in the Western part of Tohoku district and the Hokuriku district. [Liver] Higher mortality rate for both sexes was seen in Western Japan. This is associated with higher prevalence of hepatitis C virus infection in Western Japan.

75歳未満年齢調整死亡率(人口10万対)

Age-adjusted mortality rate under age 75 (per 100,000)

[肺がん] 男性は近畿地方および北海道で死亡率が高い。 [乳がん(女性)] 北九州、東日本で死亡率が高く、中国・ 南九州・沖縄地方で低い。

[Lung] Higher mortality rate for males was seen in the Kinki and Hokkaido districts.

[Breast (females)] Higher mortality rate was seen in the Northern part of Kyushu island and Eastern Japan, while lower mortality rate was seen in the Chugoku Southern Kyushu and Okinawa districts.

(14) 悪性リンパ腫 Malignant Lymphoma

(15) 白血病 Leukemia

75歲未満年齡調整死亡率(人口10万対) Age-adjusted mortality rate under age 75 (per 100,000)

(16) 大腸がん Colon/rectum

75歲未満年齡調整死亡率(人口10万対) Age-adjusted mortality rate under age 75 (per 100,000)

[前立腺がん] 東北地方北部で死亡率が高い。

[白血病] 男女とも九州・沖縄地方で死亡率が高い。これは、九州・沖縄地方で成人T細胞白血病ウィルス I型 (HTLV-I) の感染者割合が高いことと関連している。

[Prostate] Higher mortality rate was seen in the Northern part of the Tohoku district.

[Leukemia] Higher mortality rate for both sexes was seen in the Kyushu and Okinawa islands. This is associated with higher prevalence of human T-cell leukaemia virus type I infection in those regions.
